摘要 以廉价的钙铝水泥作为载氧体制备过程的载体, 并以机械混合-挤压成型造粒法制备了基于 Fe_2O_3 为载氧体活性相、钙铝水泥为载体的新型载氧体。在单流化床反应器上研究了钙铝水泥添加比例以及钾添加剂对合成载氧体的化学链燃烧性能的影响。研究结果表明, 合成载氧体中载体以 $Ca_2Al_2SiO_7$ 形式存在, 钾的添加显著提高了煤气化反应速率以及煤转化速率, 钾在稳定相中以 $K_2Fe_{22}O_{34}$ 存在。 $K_2Fe_{22}O_{34}$ 在煤化学链燃烧过程的催化性能体现在其作为储钾相与 $KFeO_2$ 相的形态转变过程中。

关键词: 化学链燃烧 碳捕集 载氧体 催化

Abstract: The calcium aluminate cement as a cheap material was used to produce a novel cement-supported Fe_2O_3 oxygen carrier via mechanically mixing and extrusion method. The ratio of cement addition and the effect of K as additive on the CLC performance of coal were experimentally investigated in a single fluidized bed reactor. The results suggest that there is a stable product of $Ca_2Al_2SiO_7$ formed in the oxygen carriers. The coal gasification rate and conversion rate are significantly accelerated by K in the oxygen carrier samples. A stable phase of $K_2Fe_{22}O_{34}$ is found in the oxygen carriers. The catalytic effect of K in the coal CLC process depends on the phase transformation of $K_2Fe_{22}O_{34}$ and $KFeO_2$.
