Ca. In the next 10 days, as the first major cold front moves through the area, temperatures will drop from the mid-70's to the upper 40's. This will bring a significant amount of snow to the area, with up to 10 inches expected in the northern part of the state. The snow will be accompanied by strong winds, which could cause power outages and travel disruptions. It is recommended that people stay indoors during the storm and avoid unnecessary travel. If you must travel, please take extra precautions and drive slowly on icy roads. The National Weather Service has issued a winter weather advisory for the entire state, so it is important to stay informed and prepared.
