ICAO > Meetings > Symposium on Innovation in Aviation Security

Symposium on Innovation in Aviation Security, 21 - 23 October 2014

Symposium overview - "Where Security and Technology Meet"

Based on the theme of *Innovation for the Enhancement of Aviation Security*, the first-ever Symposium on Innovation in Aviation Security will help States, industry, academic researchers and other AVSEC professionals explore how technology, tools and equipment can help States and industry meet both existing and future aviation security challenges.

The proposed three-day Symposium will feature presentations and panels on themes such as: optimizing technology; achieving a better balance between security and facilitation; accelerating the transfer of innovative methods to less developed States; optimizing partnerships between State authorities and manufacturers; creating and applying knowledge through innovation; promoting research and development; and empowering people and firms toward innovation.

If you would like to take advantage of this invaluable networking and learning opportunity and help set the course for the newest security and facilitation solutions, please consult this website over the coming months for further information on this important 2014 event.

Symposium details

Date: 21 to 23 October 2014

Location: Montréal, Canada

Venue: ICAO Headquarters

Registration

Online registration for the Symposium will be available soon. If you would like notification of when registration becomes available, you can submit your e-mail address and we will put you on our contact list.
