中文摘要:目的:利用NMU2R稳定细胞株并通过siRNA干扰分析筛选柑橘类黄酮对NMU2R有激活效应的物质。方法:利用NMU2R细胞考察9种柑橘黄酮对NMU2R的激活效应,然后针对激活效应较高的柑橘类黄酮,分别用阴性细胞和NMU2R的siRNA干扰分析来排除假阳性干扰。结果:柑橘类黄酮中的橙皮苷和川陈皮素能有效激活NMU2R,橙皮苷和川陈皮素的效能、半效浓度、效价强度分别为4.688, 318.970 $\mu\text{mol} \cdot \text{L}^{-1}$, 200.933 $\mu\text{mol} \cdot \text{L}^{-1}$ 和4.758, 5.832 $\mu\text{mol} \cdot \text{L}^{-1}$, 5.124 $\mu\text{mol} \cdot \text{L}^{-1}$ 。结论:柑橘类黄酮中的橙皮苷和川陈皮素都对NMU2R有激活效应,川陈皮素的半效浓度较低,具有药用开发价值。

中文关键词:NMU2R 激动剂 橙皮苷 川陈皮素 小干扰RNA

Activating effect of citrus flavonoids on Neuromedin U2 receptor and analysis on siRNA interference

Abstract:Objective: To screen out active substances on Neuromedin U2 receptor (NMU2R) by using stable NMU2R cell lines and negative cell lines and analyzing siRNA interference. Method: NMU2R cells were used to observe the activating effect of nine kinds of citrus flavonoids on NMU2R cell. Afterwards, false-positive interference of citrus flavonoids that showed higher activating effect was eliminated by using negative cells and analyzing the efficiency of siRNA interference. Result: Hesperidin and nobletin contained in citrus flavonoids were found to effectively activate NMU2R. The efficacy, EC₅₀ and potency values of hesperidin were 4.688, 318.970 $\mu\text{mol} \cdot \text{L}^{-1}$ and 200.933 $\mu\text{mol} \cdot \text{L}^{-1}$, while the efficacy, EC₅₀ and potency values of nobletin were 4.758, 5.832 $\mu\text{mol} \cdot \text{L}^{-1}$ and 3.124 $\mu\text{mol} \cdot \text{L}^{-1}$. Conclusion: Hesperidin and nobletin contained in citrus flavonoids can activate NMU2R. Nobletin shows such a low EC₅₀ that it has medicinal value.

Keywords: NMU2R agonist hesperidin nobletin siRNA
