

Welcome To SCRI

SCRI is a Scottish success story. We are the bridge between rural production and urban wellbeing. We have an unrivalled track record of delivering innovative knowledge, products and services that enrich the Scottish and UK economies.

SCRI is active in 30 countries supporting sustainable development and the production of healthy, natural food.

Joining the SCRI website enables you to make the most of your visit. Being a member means you can:

- Comment on news items.

SCRI members can also subscribe to our email bulletins, which include:

- News
- Events
- Careers.

Note: Membership is optional - registration is not required to read any section of the SCRI website.

We work towards the efficient use of resources in resilient and sustainable managed systems. The resources include energy, carbon, nitrogen, phosphorus and water. Sustainability incorporates a healthy environment and long-term economic viability.

Using state-of-the-art approaches in breeding and genetics, we aim to deliver the next generation of crops that give farmers and consumers the best options for good food.

Plant Products And Food Quality

The programme conducts research into the chemical, biochemical and genetic bases of quality and bioactivity in plant-derived foods and products.

Plant Pathology

We aim to understand disease processes from molecules and cells to pest and pathogen populations; our research provides underpinning knowledge for crop improvement through development of durable host resistance and sustainable disease control strategies.
