DESCRIPTION

Bamboo-based economic activities are an intrinsic part of rural livelihoods in Nepal, one of the most resource-poor countries. Bamboo is a major source of employment, although the share of bamboo-based activities is declining. This report examines extensive bamboo production-to-consumption systems in three districts of eastern Nepal, an area known for its rich bamboo resources and bamboo-based rural enterprises. The report recommends speeding up the implementation of recent forest policy reforms and additional backing through financial and technical support for bamboo enterprises. The report also recommends that bamboo-based development schemes planned by the government and private sector should be actively encouraged.
