### DESCRIPTION

China and India have 14 million hectares under bamboo and produce 1 billion culms of bamboo annually. In search of economic growth, both countries have undergone considerable land tenure, social organization and policy changes in the last two decades. However the actual impact of these changes, particularly on the economic efficiency and income generation of bamboo Production to Consumption Systems (PCS), has not been studied. Conversely, India's bamboo PCS is still subject to social and economic reforms, however, economic reforms have become the priority. In this study, the impact of China's reforms (land tenure and management policies) on economic efficiency and income generation of bamboo PCS? have been studied. A comparative study of bamboo PCS in China and India has been conducted. The study has suggested to improve the economic efficiency of India's bamboo PCS.
