

PRESENCE OF MYCOBACTERIA IN OTHER CELLS OF LUNG AND LIVER EXEPT IN MACROPHAGES

<http://www.firstlight.cn> 2008-12-31

Macrophages are the key cells for invading and replication of mycobacteria in the host and they play principal role in the pathogenesis of the tuberculosis. The aim of the present study was to reveal if mycobacterium invade other cells except these of immune defense and macrophages first of all as a common feature.
