7 March 2007. A new pan-European partnership has been successful in attracting 400,000 Euros (approximately ?65,000) from the European Commission's Leonardo da Vinci programme for a new project to support the creation and development of i-Labs and i-Lab facilitators. i-Labs are little-known specialist facilities that have a multitude of uses, from team-building to developing creative ideas. One of the key aims of the project is to raise awareness of i-Labs and the benefits they can provide to many organisations in both the public and private sector. The European Partnership will also launch the first ever i-Labs in Poland, Romania and Turkey and establish an i-Lab Users' Network which will work together to share information and best practice to enable i-Labs to further develop. Julie Jones, Business Development Manager at lead partner, University of Essex, says: "This is an exciting project that will increase the potential for creative thinking, improve business support, efficiency, raise occupational standards and qualifications for i-Lab facilitators and technicians. Mrs Jones says: "We would be particularly interested to hear from either i-Lab hosts or people who are or would be interested in being trained as an i-Lab facilitator or technician."
