A CASE REPORT OF CHRONIC MUCOCUTANEOUS CANDIDIASIS IN IRAN

M. Moghaddami, M. Emami, P. Toosi, L. Nabai

Abstract:

A case of chronic mucocutaneous candidiasis due to *Candida albicans* in a 13 yr-old boy is reported. Evaluation of cell mediated immunity revealed cutaneous anergy to PPD and low level of T-Lymphocytes B-Cell count and immunoglobulin G (IgG) were increased and there was a low level of serum iron. The patient was put under treatment with oral administration of Ketoconazole and ferrus sulfate, which resulted in some clinical improvement
