"Hypercalciuric hypophosphatemic rickets "

Karamifar H, Amirhakimi GH

Abstract:

A 13 year- old girl had rickets clinically evident since she was 10 years of age. She received multiple doses of vitamin D3 without improvement. This patient manifested an unusual form of hypophosphatemic rickets with hypercalciuria. It is recommended that urinary calcium excretion be assessed in all patients with hypophosphatemic rickets before the initiation of any therapy
