Experimental Study of Interference Between Pertussis Antigens and Salk Poliomyelitis Vaccine

H. Mirehamsy, H. Taslimi

Abstract:

An interference is observed between whooping-cough antigens and Salk polio vaccine even if the two components are mixed immediately before use. The phenomenon is more evident when fluid antigens are injected. Pertussis soluble antigen, which gives a good serological response in rabbits, when used alone or combined with DT, is inactivated in the presence of Salk polio vaccine.
