摘要 目的 研究四硫化四砷对NB4细胞的促凋亡作用及这一过程中早幼粒细胞白血病-维甲酸受体 α (PML-RAR α)融合基因及其表达产物的变化。方法 通过细胞形态学观察, 流式细胞仪检测及DNA电泳等方法观察四硫化四砷对NB4细胞的诱导凋亡作用, 用荧光染色体原位杂交技术, 反转录PCR及Western印迹技术测定这一过程中PML-RAR α 融合基因及其表达产物的改变。结果 四硫化四砷在 $0.5\sim 3 \mu\text{mol} \cdot \text{L}^{-1}$ 之间能诱导NB4细胞凋亡, 在此过程中, PML-RAR α 融合基因无明显变化, 但PML-RAR α 融合蛋白和野生型RAR α 蛋白的表达明显减少。结论 四硫化四砷能诱导NB4细胞凋亡, 其作用靶点可能在PML-RAR α 融合蛋白和野生型RAR α 蛋白。

Abstract

AIM To study the pharmacological effects of tetra-arsenic tetra-sulfide on apoptosis of NB4 cells and the change of promyelocytic leukemia-retinoic acid receptor α (PML-RAR α) fusion gene and its expression product during this process.

METHODS To observe the apoptosis of NB4 cells by cell morphology, flow cytometry and DNA electrophoresis, to test the change of PML-RAR α fusion gene and its expression product by fluorescence *in situ* hybridization(FISH), RT-PCR and Western blot. **RESULTS** Tetra-arsenic tetra-sulfide could induce apoptosis in NB4 cells. During this process, PML-RAR α fusion gene had no significant changes, but the expression of PML-RAR α fusion protein and wild-type RAR α all reduced. **CONCLUSION** Tetra-arsenic tetra-sulfide can induce apoptosis in NB4 cells. The degradation of PML-RAR α fusion protein and wild-type RAR α may play an important role during this process.
