摘要:

人卵巢癌阿霉素耐药细胞株是用A2780人卵巢癌细胞株作亲本,获得的能耐受 $0.8\mu\text{g}\cdot\text{ml}^{-1}$ ADM的细胞株A2780/ADM。此细胞株对ADM的耐受程度约为A2780细胞的17倍。对其他抗肿瘤药如长春新碱、鬼臼乙叉甙有明显的交叉耐药,对5-氟脲嘧啶、顺铂、米尔法兰则无明显交叉耐药性。进一步研究表明耐药株对ADM蓄积明显减少;免疫细胞化学的研究显示:A2780/ADM细胞中P-170膜蛋白和谷胱甘肽S-转移酶(GST- η)均较A2780表达高。对耐药的逆转也进行了初步研究,发现维拉帕米与ADM合用能提高A2780/ADM细胞对ADM的药物敏感性,细胞的耐受性得到部分逆转。

Abstract:

A multidrug-resistant cell line(A2780/ADM)of human ovarian carcinoma which can resist $0.8\mu\text{g}\cdot\text{ml}^{-1}$ of adriamycin(ADM)was obtained by step-wise selection exposure to increasing doses of ADM,A2780/ADM cells showed 17-fold higher resistance to ADM than A2780 cells. The doubling times were 43.8 h in A2780/ADM and 26.3 h in A2780 cells. Colony formation rates were 15%~20% in A2780/ADM and 65%~75% in A2780 cells. A2780/ADM cell line was also shown to significantly cross-resistant to vincristine(VCR) and VP-16, but no cross-resistance was found to 5-Fu, PDD or Mel. A further investigation showed that intracellular accumulation of ADM in A2780/ADM was significantly decreased. Expressions of Pglycoprotein and GST- η were increased in A2780/ADM by means of immunohistochemical method. Verapamil(Ver) combined with ADM was found to increase the sensitivity and reverse the resistance to ADM in A2780/ADM. This study indicates that A2780/ADM has the peculiarity of multidrug resistance and there may be other mechanism of drug-resistance besides MDR related to P-170.

Keywords: Multidrugresistance Doubling time p-glycoprotein A2780/ADM
