

## Immunopharmacological Approach to Elucidating the Mechanism of Allergic Inflammation

<http://www.firstlight.cn> 2005-11-25

Allergy has now become amongst the commonest disease in the world and the patients are increasing. There have been significant improvements in our understanding of allergic disease and its management. However there are still many unclear points in the precise mechanism of allergic diseases and therapy. Recent wide and extensive investigations suggest that the underlying mechanism of allergic disease is closely related to the allergic inflammation. The aim of this review is to offer a state-of-the-art description in our research concerning the allergic inflammation from the immunopharmacological standpoint.
