### La Poliomyelite en Iran Premieres Recherches de Laboratoire

A. Boue, R. Pournaki, M. Baltazard

#### Abstract:

This research work on the status of poliomyelitis in Iran, performed in 1954, in 1958-59, consisted in providing data on the past history of the infection and on its present diffusion in this country. The serological and Coprological surveys produced evidence of conditions similar to those of other countries. With the same public health situation: large and permanent (Without seasonal variation) diffusion of the enteroviruses, reaching percentages of 37 to 74% (according to the groups) of carriers-excretors in a sampling of healthy children under five years of age, providing high levels of early and complete immunization against the poliomyelitic disease.
