**Abstract:** Inflammatory fibroid polyps are uncommon gastrointestinal tract lesions. The stomach and ileum are the most commonly affected sites. Clinical symptoms depend on the location and size of the lesion. Obstruction or intussusception is the most frequent initial symptom when an inflammatory fibroid polyp is located in the small intestine. We describe two cases of inflammatory fibroid polyps of the small intestine causing ileocecal and ileoileal intussusception.

**Key Words:** Inflammatory fibroid polyp, intussusception, small bowel
