Abstract

Subdural hematoma (SDH) usually occurs secondary to trauma, in bleeding disorders it may occur spontaneously. It is a rare complication of immune thrombocytopenia. Here we report a case of 45 years female presenting with presenting with complaints of headache, palpitation and menorrhagia and later diagnosed to be a case of Grave's disease with thrombocytopenia with sub dural hematoma. No such case reports are available in literature.

Item Type:	Journal (On-line/Unpaginated)
Keywords:	Subdural hematoma; Thrombocytopenia; Hyperthyroidism; Graves disease.
Subjects:	JOURNALS > Online Journal of Health and Allied Sciences
