### Cardiac Arrhythmias in Acute and Chronic Renal Failure

Ali A. Handjani , Bijan Nazari

#### Abstract:

Cardiac arrhythmias are frequent complications in acute and chronic renal failure and they may well account for sudden unexplained death in these patients. Based upon our recent study, we strongly believe that among other causative factors, focal degeneration of myocardium is the commonest and the most potentially dangerous cause of cardiac arrhythmias. We suggest in emergency instances, ouabain to be used instead of digitalis which appears to be quite safe with dramatic results in cardiac arrhythmias of these group.
