Incidence of Renal Hypertention In Iran : (A Study Over 611 Patients)

Ali Akbar Handjani , Bijan Nazari (Nik Akhtar)

Abstract:

The cause of elevated diastolic blood pressure remains elusive in the majority of instances, however in about 3-25 per cent of all hypertensive patients an specific causative factor such as renal can be identified. Based upon our recent study, we believe that the incidence of renal hypertensions is quite high in our community with the esternate ranging from 10 to 4U per cent of all secondary hypertentions.
