摘要 Nel 样1型分子 (Nell-1) 是一种新的重要的生长因子, 其基因主要在成骨细胞的分化和程序性死亡阶段发挥重要的作用。下面着重就nell-1 基因与转化生长因子和成纤维细胞生长因子, nell-1 基因在介导成骨细胞分化过程中的作用和相关分子信号途径, Nell-1 蛋白对成骨细胞和成软骨细胞胞外基质蛋白的调控作用等作一综述。

Abstract: Nel-like type 1 molecule (Nell-1) is one of the novel growth factors with important biological function on the differentiation and apoptosis of osteoblasts. This review emphasized on the gene expression cascades between nell-1 and transforming growth factor or fibroblast growth factor, the signal regulation mechanisms and associated molecular signal pathways of nell-1 regulating the differentiation of osteoblasts. The effect of Nell-1 regulating the extracellular matrix (ECM) proteins that are necessary in osteogenesis and chondrogenesis has also been discussed.
