## Change in Lip Contour with Maxillary Incisor Retraction

BENJAMIN H. WALDMAN<sup>a</sup>

<sup>a</sup>Dr. Benjamin H. Waldman, 47 Avonwood Road, Avon, CT 06001

### ABSTRACT

Evaluation of upper lip retraction with retraction of the incisor edge in 41 Class II cases showed an average ratio of 1:3.8. Increase in the nasolabial angle was found to be associated with change in incisor angle and with palatal tilt, but there was no consistent relationship with horizontal movement of the incisor edge.

Dr. Waldman is in the private practice of dentistry in Avon, Connecticut. He is a dental graduate (D.D.S.) of the University of Maryland. This study was done as a resident in the department of Dentistry, Oral and Maxillofacial Surgery at Mount Sinai Hospital in Hartford, CT
