Late Lower Arch Crowding in Relation to Primary Crowding

MARGARET E. RICHARDSON^a

^aMargaret E. Richardson, Orthodontic Department, School of Dentistry, Royal Victoria Hospital, Grosvenor Road, Belfast, BT12 6BA, NORTHERN IRELAND

ABSTRACT

A preliminary study of changes in crowding during the five years following eruption of all permanent teeth anterior to the third molar, showing a tendency toward increased crowding with some reciprocal interrelationships between anterior and posterior crowding.

Margaret Richardson is Associate Specialist Orthodontist at the School of Dentistry in Belfast, Northern Ireland. She holds B. Dent. Sc. and M. Dent. Sc. degrees from Trinity College in Dublin and a Diploma in Orthodontics from the Royal College of Surgeons in London
