CHOLERA EL-TOR EN IRAN

M. Ghodssi

Abstract:

The bacteriological analysis shows that we have been confronted with the ELTor type, and only that type, until the end of the epidemic. The clinical study presents the symptoms of the real cholera with all its grievous consequences. The epidemiological supertniscn states that the El.Tor cholera is not aggressive all in town areas whereas it presents its usual aspect in country areas, because of a lack of hygiene. there. That disease can be completely cured if the balance between the electrolytes is quickly restored. The disease was all the more dreadful since it came as a surprise and spread from one province to the other. L'examen bacteriologique montra qu'il s'agit du type El_Tor et uniquement du meme type jusqu'a la fin de l'epidemie. La surveillance epidemiologique constate que le cholera El_Tor n'est nullement agressif dans le milieu urbain; mais qu'il revet l'aspect classique dans les milieux ruraux, depourvus d'hygiene. La maladie est totalement guerissable a condition que l'equilibre des electrolytes soit rapidement retabli. L'evenement a vu la maladie se repandre d'une
