The Use of Nasal Septum Chondromucosal Grafts In Reconstruction of The Lower Lid and Cheek

Mohammed Abedipour

Abstract:

Five cases of extensive lid-cheek basal cell carcinoma are presented. Treatment was by wide excision followed by immediate reconstruction using the nasal septal chondromucosal graft technique of Millard. The advantages of this procedure in an elderly, rural population of working people over other modes of reconstruction are noted. The success of this procedure recommends its wider application.
