A SURVEY OF SOUTH TEHRAN TEXTILE WASTE WATERS

A.R. Mesdaghinia; H.Kakooee

Abstract:

The industrial effluents of three textile plants in the south of Tehran were studied. In each plant all related factors such as raw material consumption, production processes and water use at different points were examined. These plants discharge their effluents into the environment without any treatment. The common characteristics of these wastes are quantity and quality variability, organic pollution, colored substances and variable pH.
