DETECTION OF ANTIBIOTIC RESIDUES IN RAW MILK

G. Karim, C. Navabpour

Abstract:

Milk and milk products containing antibiotics especially penicillin may present a health hazard to individuals who are super sensitized to penicillin. A total of 620 samples of raw milk which were delivered to Tehran pasteurization plant were examined. 294 samples were antibiotic-negative and 326 samples showed to contain antibiotic. Considering the results obtained, certain recommendations were made to prevent public health hazards and economic losses.
