Abstract: As malaria continues to be a public health problem in the is now the responsibility of the Local Government Unit (LGU). In th mobilization is believed to be the key strategy in effective and sustai malaria prevention and control activities. Palawan has always been t province in the country. Despite untiring malaria control efforts and this malady for which Palawan has become known, this province rei

contributor of malaria cases and deaths. Thus, Kilusan Ligtas Malar Movement Against Malaria) has focused on social mobilization in th malaria prevention and control. Microscopic confirmation of malari village microscopists, while health education-promotion activities, a building are carried out by trained village community organizers. Th are the increase in malaria case finding as reflected in the total num done, the increase in microscopic confirmation of malaria, and the de diagnoses. Other outcomes include policy development and imple executive orders and community ordinances to support the village n community organizers. Now, the biggest challenge of KLM is maint and sustaining gains.
