ANALYSIS OF THE ACCIDENTS OF THE CAR MANUFACTURING INDUSTRIES

J.Adli ; Z. Mohammad zade

Abstract:

Car manufacturing industry accident's rates from three major companies are analyzed. Totally 1325 accidents with 4 cases of fatality were recorded. Accident rates per 100 full-time workers have gradually increased from 5.3 to 8.7 during 3 years of study. Most of the accidents occurred during the primary hours of the work, Strains and sprains represented the most frequently occurring type of injury, accounting for 37.9% and the greatest number of injuries occurred by flying particles (3 1.6%), resulting in eye injuries. Other aspects of accidents in this industry are discussed and recommendations are given for their prevention.
