摘要:

为寻找和合理利用植物资源及控制生药质量,用RP-HPLC法分离并测定了重楼中9种甾体皂甙,其中4种为偏诺皂甙元的糖甙,5种为薯蓣皂甙元的糖甙。分析柱为C₈(4.6mm×250mm),乙腈—水(42:58)为流动相,检测波长203nm,9种甾体皂甙峰与其相邻峰能达基线分离,且线性良好, $\gamma=0.9996\sim0.9999$,回收率97.1%~100.2%。本法简便、快速、灵敏。用此法对不同产地重楼中9种甾体皂甙类化合物进行了分析,结果提示不同产地重楼中各成分含量差异较大。

Wei Jianrong

Abstract:

A reversed phase HPLC method for the separation and determination of nine steroid saponins in *Rhizoma paridis* is described. The column was Symmetry C₈, mobile phase was acetonitrile—water (42: 58), UV detection was performed at 203 nm. The calibration curves showed good linearity over the range of 0.8~12.0 ug, $\gamma=0.9996\sim0.9999$. The recoveries were 97.1%~100.2% for the nine steroid saponins. The method is simple, fast, sensitive and accurate and has been applied to the analysis of *Rhizoma paridis*. The results showed that the contents of the nine steroid saponins in *Rhizoma paridis* were different with different sources.

Keywords: *Rhizoma paridis*; Steroidal saponin; RP-HPLC
