摘要 目的 探讨cAMP-PKA信号通路对细胞色素P4503A (CYP3A) 在正常肝细胞L02表达中的作用。方法 L02细胞中分别加入8-溴-环腺苷酸(8-Br-cAMP) 10 $\mu\text{mol}\cdot\text{L}^{-1}$ 及抑制剂H-89 10 $\mu\text{mol}\cdot\text{L}^{-1}$, 培养48 h, 分别采用完整细胞免疫组化法、Western印迹法和红霉素-N-脱甲基法检测细胞中PKA、孕烷X受体(PXR)及CYP3A的表达。**结果** 与正常对照组PKA蛋白表达 (211±20)、PXR蛋白表达 (0.45±0.14) 及CYP3A的活性 ((0.38±0.02) $\mu\text{mol}\cdot\text{min}^{-1}\cdot\text{g}^{-1}$ 蛋白) 相比, 8-Br-cAMP 10 $\mu\text{mol}\cdot\text{L}^{-1}$ 处理后, 细胞PKA蛋白表达 (296±18) 升高、PXR蛋白表达 (0.69±0.21) 升高、CYP3A的活性 ((0.43±0.01) $\mu\text{mol}\cdot\text{min}^{-1}\cdot\text{g}^{-1}$ 蛋白) 增强; H-89 10 $\mu\text{mol}\cdot\text{L}^{-1}$ 处理后细胞中PKA蛋白表达 (176±14) 降低, PXR蛋白表达 (0.47±0.13) 及CYP3A的活性 ((0.39±0.05) $\mu\text{mol}\cdot\text{min}^{-1}\cdot\text{g}^{-1}$) 减弱, 无统计学差异。**结论** cAMP-PKA信号通路可能是药物代谢酶CYP3A的调控途径之一。

Abstract

OBJECTIVE To observe the effect of cAMP-PKA signal pathway on the activity of cytochrome P4503A (CYP3A) in L02 cells, and to explore the mechanism. **METHODS** L02 cells were treated with agonist 8-Br-cAMP 10 $\mu\text{mol}\cdot\text{L}^{-1}$ and inhibitor H-89 10 $\mu\text{mol}\cdot\text{L}^{-1}$. The expression of pregnane X receptor (PXR) and protein kinase A (PKA) protein were detected by Western blotting and immunohistochemistry. The activity of CYP3A was detected by ultraviolet spectrophotometry. **RESULTS** Compared with the activity of CYP3A ((0.28±0.02) $\mu\text{mol}\cdot\text{min}^{-1}\cdot\text{g}^{-1}$ protein), the expression of PXR (0.45±0.14) and PKA (211±20) in normal control group, the activity of CYP3A ((0.43±0.01) $\mu\text{mol}\cdot\text{min}^{-1}\cdot\text{g}^{-1}$ protein), and the expression of PXR (0.69±0.21) and PKA (296±18) increased in 8-Br-cAMP group while the expression of PKA (176±14) decreased. The activity of CYP3A ((0.39±0.05) $\mu\text{mol}\cdot\text{min}^{-1}\cdot\text{g}^{-1}$ protein) and the expression of PXR (0.47±0.13) were no statistical significance in H-89 group. **CONCLUSION** The cAMP-PKA singal pathway can regulate the CYP3A in L02 cells.
