中文摘要:目的:采用气相-质谱(GC-MS)分析金花茶叶乙醚部位的化学成分。方法:采用75%乙醇回流提取金花茶叶,滤液浓缩后用乙醚萃取,得到乙醚部位,用GC-MS法分析鉴定其化学成分,结合计算机检索技术及美国国家标准技术研究所(NIST)化合物谱库检索进行鉴定,再用面积归一化法确定其相对含量。结果:金花茶叶乙醚部位的成分共分离鉴定出61个化合物,相对含量占总含量的78.41%,主要化学成分是2-(氧代十八烷基)乙醇,二十五烷,1-碘代十六烷等。结论:可用GC-MS法快捷、简便、准确地分析金花茶叶乙醚部位成分。初步揭示了该药材化学成分,对进一步研究其化学成分、为药材的质量评价提供实验基础。

GC-MS Analysis of Ether Extraction of *Camellia chrysanthra*

Abstract:Objective: To analyze the chemical constituents of volatile oil from the leaves of *Camellia chrysanthra*. Method: By extracting *C. chrysanthra* with 75% ethanol, the filtrate was concentrated and extracted with ether to get the ether parts, and the chemical composition was identified and analyzed by GC-MS method. Combining with computer retrieval technology and search of national institute of standards and technology(NIST) compound spectral-library for identification, their relative content was determined by the area normalization method. Result: Sixty-one kinds of chemical constituents were isolated from the ether parts of *C. chrysanthra*. The relative content is 78.41% in the total content, the main chemical ingredients were 2 -(oxo-18 alkyl) ethanol, two pentadecane, 1-iodo-hexadecane, and so on. Conclusion: The present GC-MS method is fast, simple and accurate to analyze the composition of ether parts of *C. chrysanthra*. It initially revealed the chemical composition of the medicine, and provided the experimental basis for further study of its chemical composition and the medicinal quality evaluation.
