中文摘要: 上市中药文献分析任务繁重, 利用计算机自动提取目标信息之后再进行人工检查, 可以简化工作, 提高效率。该文分析了上市中药文献信息提取的难点, 认为非术语信息的匹配和不同分组的同类信息的区分是影响常用信息提取技术在上市中药文献信息提取中应用的两大关键问题。该文分析了正则表达式的模式匹配对于解决上述两大问题的价值, 并选取“病例数”(非术语信息)和“有效率”(不同分组同类信息区分)2种信息, 以此为案例探讨了基于正则表达式的信息提取方法, 初步实践了这一思路。

中文关键词: 中药上市后再评价 文献分析 正则表达式 信息提取

Application of regular expression in extracting key information from Chinese medicine literatures about re-evaluation of post-marketing surveillance

Abstract: Computerizing extracting information from Chinese medicine literature seems more convenient than hand searching, which could simplify searching process and improve the accuracy. However, many computerized auto-extracting methods are increasingly used, regular expression is so special that could be efficient for extracting useful information in research. This article focused on regular expression applying in extracting information from Chinese medicine literature. Two practical examples were reported in this article about regular expression to extract "case number (non-terminology)" and "efficacy rate (subgroups for related information identification)", which explored how to extract information in Chinese medicine literature by means of some special research method.

keywords: re-evaluation post-marketing surveillance Chinese medicine literature regular expression information extraction
