(Accepted March 27, 2007)

**Abstract:** *Simulium* (*Simulium*) *chanyae* sp. nov. is described based on specimens collected in Northern Thailand. This new species is assigned to the *multistriatum* species-group of the subgenus *Simulium* (*Simulium*) and is distinguished from most of the other known species of this species-group by the number of legs.

**Key words:** [Simulium](#), [black fly](#), [Simuliidae](#), [Thailand](#), [new species](#)
