## Use Data-depend Function Build Message Expansion Function

*ZiJie Xu and Ke Xu*

**Abstract:** We had found functions can be used to fix bits [2] by given differences. We use these functions build a message expansion function. In the message expansion function, there are some bits include message bits and incremental bits produced from message bits, these bits will be used as parameter of data-depend function. This message expansion function will fixed at least  $n \times 5.5$  bits with given differences, and any message modification will affect at least 8 data-depend function parameter.

**Category / Keywords:** Message expansion function, Data-depend function, message modification
