

## ePrints at HR Wallingford

HR Wallingford carries out independent research and consultancy in civil engineering and environmental hydraulics. We provide our clients with innovative yet practical solutions to their problems. The quest for knowledge through a healthy research programme remains fundamental to our success, and keeps us at the leading edge in our field.

This ePrints repository is an online service developed as an archive for research material published by HR Wallingford's world-class staff. It includes peer-reviewed journal articles, published conference papers and research reports that have been produced both as a result of commissioned research and our self-funded research programme. Our long-term goal is to create an Open Access repository providing free access to our full collection of published research outputs. As well as adding new material as it becomes available, we will add historical information where ever possible, with the aim of making it available to the widest possible audience.

For more information about HR Wallingford and our research and consultancy activities, visit [our web site](#).

### Registering as a User

Users can search the archive and browse records and abstracts. To view full text pdf articles, you will need to become a registered user by creating a free user account. To create your free account, click "Create Account" in the menu above and enter your email address and a password when requested. You can also choose to receive alerts when material of interest is added to the repository.
