Abstract This paper deals with a new species of the genus *Anteon* Jurine from China. Type specimen is preserved in Zhejiang Agricultural University.

Anteon chui sp. nov. (fig. 1)

This new species is allied to *Anteon pahanganum* Olmi, 1989, but differs from the latter in: 1) head with POL shorter than OOL; 2) scutum punctate, without reticulate rugose; 3) notaulices incomplete, reaching 0.50 length of the scutum; 4) the shape of male genitalia.
