

Functional Domain of the Croatian Complementizer *da*

Author Tamara Grivičić
University of Colorado at Boulder

In this paper I address the function of the complementizer *da* in Croatian. Craig (1975), Frajzyngier (1995), Frajzyngier (1996), Vrzic (1996), and Krapova (1999) have contributed much literature about this particular complementizer. However, such studies focused on the analysis of the syntactic properties of *da*, that is, the structure of sentences in which this complementizer occurs. Using the principle of functional transparency and independent coding means, introduced by Frajzyngier and Shay (M.S.), as the point of departure, the goal of the present study is to uncover the function of this complementizer and what it is the coding means of. Drawing on older publications, an ample selection of sentences from the online National Data Corpus of the Croatian Language (NDC), and further elicited examples (NSE) and judgments from native speakers of Croatian (NSJ), I will show that *da* is an independent coding means and that its semantic function is to code modality. In particular, I will reveal that *da* is a coding means of potentially realizable habitual events, and that as such it belongs to the *de dicto* domain.

Introduction

According to Jakab, the *da*-complementizer introduces a complement clause, which is frequently used in place of an infinitival complement (1999, 217).¹ The complement clause therefore provides a filler, that is, additional information for the previous predicate of mention. And although *da* functions to introduce a complement clause, this is not its only function. But before proceeding into an investigation of the more exact function of *da*, a couple of important facts must first be established.

- A. In their work, referred to in Edit Jakab (1999, 219), Progovac (1993) and Vrzic (1996) proposed two semantically separate but homophonous *da* complementizers. I will show that there is one and only one *da*-complementizer and provide sufficient evidence for distinction between *da-comp* and any other homophonous '*da*'.
- B. I will illustrate that although it is the case that verbs are subcategorized for specific complements, that no verb licenses the *da* complementizer. This in turn will lead toward the conclusion that *da* must be an independent marker, a morpheme that is used as a means of coding a specific semantic function of and by itself, irrespective of the verb or any other utterance it occurs with.
- C. Once all the necessary distinctions and specifications have been made, I will introduce the testing methods, which will reveal the actual function of our complementizer.
- D. The last section of this paper gives a brief overview of the most crucial arguments about the functional nature of the *da* complementizer and offers some concluding remarks.

1. I must mention, however, that in the Croatian standard stokavsko-jekavski dialect infinitival formations are still much preferred to *da*-constructions, but this is not the case with other dialects.

1. Preliminary Discussion

1.1. Homophonous da(s)

1.1.1. Dati ‘to give’

One ‘da,’ for which distinction must be made, is the third person singular form of the verb *dati* ‘to give.’ This verb is ditransitive and typically takes two NP complements, which are realized as a clitic in the embedded clause and precede the verbal form ‘da.’

- (1) Igor hoce njemu dati novi auto. (NSE)
Igor want-3sg him-DAT give-new-Acc car-Acc
Igor wants to give him a new car.
- (2) On hoce **da** mu ga **da.** (NSE)
*he want-3sg **da** him-DAT it-ACC give-3sg*
He wants to give it to him.

Unlike the verbal form, *da* complementizer must have a clause following it and cannot occur sentence finally (see examples (15) and (18) in section 2.1 for additional comparison).

1.1.2. Allegations of two homophonous but semantically distinct da-complementizers

In her 1996 paper, Vrzic claims that there exist two homophonous *da* complementizers: “modal” and “declarative” *da*. She bases her statement on her observation that the modal *da* “is only compatible with the present tense verb..., [while] the declarative *da* is compatible with imperfective verbal aspect only” (307). Vrzic offers an extensive list of examples purportedly providing evidence for her claims. Here are some of her examples (305-6):

- (3) Kaze **da** Vesna čita ovu knjigu.
say-3sg **DM** Vesna-Nom read-3sg this-Acc book-Acc
He says that Vesna reads/is reading this book.
- (4) Zelim **da** čitam ovu knjigu.
wish-1sg **MM** read-1sg this-Acc book-Acc
I wish to read this book.
- (5) Tvrdim **da** čitam ovu knjigu.
claim-1sg **DM** read-1sg this-Acc book-Acc
I claim that I'm reading this book.

Example (3) has a present tense matrix verb *kazati* ‘to say’ and is followed by a *da*-complement. According to Vrzić, because *da* follows a non-imperfective present tense

verb, it is declarative. In example (4), the matrix verb has the imperfective aspect, *zeljeti* (imperfective) (vs. *pozeljeti* (perfective)), and so she claims that the *da* complementizer is subjunctive-like. It is important to note here that although *zelim* ‘I wish’ is coded for the imperfective aspect, that it is also in the present tense. The two categories, aspect and tense, are not mutually exclusive. Vrzić’s explanation about the distribution and patterning of the *da* complements falls short here. Example (5), shows a verb in the imperfective aspect and present tense, *tvrđiti* (imperfective) vs. *potvrđiti* (perfective), but the complementizer is claimed to be declarative. If Vrzić were correct in her analysis, the *da* complementizer in the last example should be modal and so should be the mood of the sentence, yielding something along the lines of: *I claim that I ought to read this book.* This is not one of the possible meanings for the sentence though.

Let us consider some additional examples offered by Jakab (219). Aligning with Vrzić, he claims that the presence of the declarative *da* brings about the indicative mood, whereas the modal *da* renders the modality subjunctive-like. Consider example (6) below. The matrix verb is in the present tense form and the sentence in the indicative mood. The complementizer is claimed to be *declarative*. Sentence (9) appears to be identical to sentence (6) except for the lexical entry of the matrix verb, which is also in the present tense. According to Vrzić, sentence (9) should be interpreted as being in the subjunctive-like mood, in part because of the presence of a semantically different *da*. However, I am not convinced that either Jakab’s or Vrzić’s examples support their claims in full.

- (6) Kaze ***da₁*** Petar cita ovu knjigu. (Jakab, 219)
 say-3sg ***da*** Petar-Nom read-3sg this-Acc book-Acc
He says that Petar is reading this book.

- (7) ?Kaze ***da₂*** Petar cita ovu knjigu. (NSE/NSJ)
 say-3sg ***da*** Petar-Nom read-3sg this-Acc book-Acc
**He says that Petar would read this book.*

- (8) Kaze ***da₁*** je Petar citao ovu knjigu. (Jakab, 219)
 say-3sg ***da*** Aux Petar-Nom read-pst3sg this-Acc book-Acc
He says that Petar has read this book.

vs.

- (9) Zelim ***da₂*** Petar cita ovu knjigu. (Jakab, 219)
 wish-1sg ***da*** Petar-Nom read-3sg this-Acc book-Acc
I wish for Peter to read this book.
- (10)?Zelim ***da₁*** Petar cita ovu knjigu. (NSE/NSJ)
 wish-3sg ***da*** Petar read-3sg this-Acc book-Acc
**He wishes Petar is reading this book.*
- (11)Katkad pozelim ***da*** Petar cita ovu knjigu. (NSE/NSJ)
 occassionally perf-wish-1sg ***da*** Petar-Nom read-3sg this-Acc book-Acc
Sometimes I wish for Petar to read this book.
- *Sometimes I wish Petar is reading this book.*

If the presence of a different *da* complementizer yields a different mood, then substituting these complementizers should cause a change in the mood of the clause. This doesn't appear to be the case as illustrated in the NSE example in (7). Placing a modal *da* inside of a clause doesn't render the meaning subjunctive-like. The same applies to example (10). The declarative *da* doesn't yield an indicative mood for the clause. NSE solicited example (11) shows a sentence with a perfective present tense matrix clause verb and a *da* complement. The meaning of the sentence is judged by the native speaker to be 'wishful thinking' and the mood subjunctive-like with no possibility of indicative interpretation.

So, at a closer look, the data presented by Vrzić and Jakab do not provide adequate evidence for the existence of two homophonous yet semantically distinct *da*-complementizers. However, I do agree with them that sentence (6) is in the indicative mood, whereas sentence (9) codes a subjunctive-like modality. A more advanced and detailed research may ultimately prove that there exist two semantically-different yet homophonous *da*(s). For the time being, however, it might be more feasible to posit that the subcategorization properties of a verb, which specify verbal complement preferences, provide an environment for the appearance of a *da*-complement. The overall modality of a clause then depends on the combination of a complementizer with the lexical as well as aspectual properties of the verb. To claim otherwise, there would have to be some kind of a formal distinction between the two sentences using '*da₁*' and '*da₂*', be it syntactic, configurational or semantic difference. And there isn't one. The above examples show that both *da₁* and *da₂* occur in identical syntactic constructions, do not change the meaning of the clauses if swapped.

1.2. Verbs and their complements

Although it is true that some verbs prefer *da*-complements, I found only one case in which a verb primarily takes the *da*-complement. This verb is *smatrati* 'to consider'

(please see *Appendix B* for examples). However, as the NDC² examples (12) and (13) illustrate, even this verb does not exclusively take a *da*-complement:

- (12) “...i zapravo je **smatram** gitarom s plasticnim zicama.” (NDC: N146_24 15397 11)
 and actually it consider guitar with plastic wires
...and actually I consider it to be a guitar with plastic wires.

- (13) “Sebe uopće ne **smatram** diskriminiranim zato sto sam zena.” (NDC: N135_K10 4513457 45)
 refl really not consider discriminated because am woman
I don't consider myself discriminated against just because I'm a woman.

The fact that there is no one verb that always triggers the *da*-complementizer (and therefore a *da*-clause) contradicts the claim made by Krapova and Petkov (1999) that the *da*-comp is “licensed,” in the traditional sense of the word, by the verb that precedes it. If an item were “licensed” by another utterance, it would always have to occur in conjunction with this trigger. Since no singular utterance triggers the existence of a *da*-complementizer, and since its omission causes ungrammaticality (see examples (16), (19), (22), and (24) in section 2.1), *da*-comp must be an independent coding means.

The notion of independent coding means has been proposed by Frajzyngier and Shay (M.S.). They assert that inflectional coding, which subsumes complementizers, is “not triggered by any other component of an utterance” (9). They say that this claim has been supported by an abundance of cross-linguistic evidence confirming that inflectional lexical items are found “in utterances lacking any potential trigger of inflection” (9).

The notion of independent coding means, compounded with the principle of functional transparency, bears important implications on the function of the *da* complementizer. The principle of functional transparency states that “every utterance must have a transparent function within the discourse” and that this function must be transparent to the hearer (Frajzyngier and Shay, 3). Along the lines of these two premises, the *da*-complementizer is an utterance that is expected to code a specific function within the discourse. It is further predicted that as an inflectional marker, *da* will occur independently of any trigger utterances and that its function is readily available to the native speakers. The following section shows that the above-mentioned premises hold for the *da*-complementizer, and it attempts to draw out its function.

2. Methods

In order to tease out the function of the *da*-complementizer, I use examples and discussion from older publications as the springboard. I further include an ample selection of sentences containing this complementizer and other relevant data (specific verbs, other complementizers, etc.), which I acquired from the National Data Corpus (hereafter NDC) of the Croatian Language, a search engine located at <http://www.hnk.ffzg.hr/>. I then augment the examples gathered from older publications and NDC with a set of sentences with omitted or inserted *da*-comps or otherwise changed

2. Examples with the link style references following an example, such as NDC: N146_24 15397 11, are taken directly out of the search engine and point to the addresses from the online National Data Corpus (NDC) of Croatian language where that sentence is located.

sentence structure. These I presented to several native speaker of Croatian, including myself, with the goal of acquiring native speaker judgments (NSJ) about the grammaticality and acceptability of the original and augmented sentences.

The total of the analysis then consists of the following three steps:

- a. Focusing on the data gathered from the NDC and older publications, I look at where *da* occurs and how it is used. (please see *Appendix C* for examples)
- b. Then using the original and augmented examples, I solicit native speaker judgements (NSJ). I then incorporate these judgments, based on the native speaker intuition, and discuss any relevant findings.
- c. Finally, I contrast sentences with *da-comp* against those that are identical in structure except that they contain other main Croatian complementizers, namely *sto* and *kada*. The purpose of doing this is to test the altered sentences for any change in meaning.

The present premise is as follows:

If a clause remains fully comprehensible and grammatical after the *da*-comp has been omitted (or inserted), retaining its original meaning, then this will provide evidence that *da* has no semantic function within the discourse utterance. If, however, the meaning changes drastically or a clause is rendered incomprehensible or ungrammatical, then *da* must play an important function.

If the latter claim is realized, I will seek to draw out the function of *da* on the bases of the change in the meaning (especially focusing on the changes created when complementizers are interchanged).

2.1. Instances where *da* occurs

First and foremost, as examples (15) and (18) illustrate, the *da*-complementizer cannot stand alone and must always be followed by a clause. Second, omission of the *da*-complementizer either renders the sentence ungrammatical or it may bring about a new meaning (see examples (16), (19), (22), (24)).

- (14) Uputili su se u setnju ***da*** se umire. (NSE)

went-3pl Aux-3pl refl in walk ***da*** refl calm-3pl

They went for a walk (in order) to calm themselves.

- (15) *Uputili su se u setnju ***da*** \emptyset . (NSE/NSJ)

went-3pl Aux-3pl refl in walk ***da***

They went for a walk (in order) [to calm themselves].

- (16) *Uputili su se u setnju \emptyset se umire. (NSE/NSJ)

went-3pl Aux-3pl refl in walk refl calm-3pl

(no alternative meaning rendition)

(17) Otivam tam (za) da kupja xljab.

Otisao je tamo ***da*** kupi kruh. (NSJ translated Penchev, 351)
 left-3sgM Aux-3sg there ***da*** buy-3sg bread-Acc
He went there (so that/in order) to buy bread.

(18) *Otisao je tamo ***da*** \emptyset . (NSE/NSJ)

left-3sgM Aux-3sg there ***da***
He went there (so that/in order) [to buy bread].

(19) *Otisao je \emptyset kupi kruh. (NSE/NSJ)

left-3sgM Aux-3sg buy-3sg bread-Acc
(alternative meaning rendition: “He left, so go buy some bread.” –not a standard dialect version)

(20) Kaza ***da*** dojdes. (Penchev, 348)

say-3sgM ***da*** come-2sg
He said that you should come.

(21) Rekao je ***da*** dodes. (NSE/NSJ for standard Cro dialect of (20))

say-3sgM Aux-3sg ***da*** come-2sg
He told you to come.

(22) * Rekao je \emptyset dodes. (NSE/NSJ)

say-3sgM Aux-3sg come-2sg
(no alternative meaning rendition)

(23) Rekao je ***da*** ces doci. (NSE/NSJ)

say-3sgM Aux-3sg ***da*** FUT come-2sg
He said that you would come.

(24) * Rekao je \emptyset ces doci. (NSE/NSJ)

say-3sgM Aux-3sg FUT come-2sg
(alternative meaning rendition: “He said: ‘Will you come?’ ”)

When used appropriately, ***da*** appears in several different constructions. One such construction involves adverbial clauses of purpose. Within these clauses ***da*** is used to express the reasoning for the action of the matrix clause and thus provides a logical reason for the conclusion (see examples (14) and (17)).

da also denotes potentially realizable events as seen in examples (21) and (23). ***da*** further appears in the function of a conjunction between two finite clauses (examples (25))

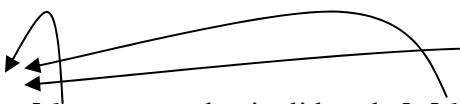

and (26)), but the meaning of a clause changes depending on the presence of other utterances in the embedded clause:

- (25) Zabranih mu ***da*** dode ovdje. (NSJ translated Penchev, 348: Zabranix mu da idva tuk)
 forbid-1sg him-DAT ***da*** come-3sg here
I forbade him to come here.

- (26) Zabranih mu ***da*** bi dosao ovdje. (NSJ translated Penchev, 348: Zabranix mu, za da idva tuk)
 forbid-1sg him-DAT ***da*** would-2/3sg come-sgM here
I forbade him so that he would come here.

Another point that ought to be made is that *da*-clauses are sequentially dependent. In a sentence with multiple embedded clauses, each *da*-clause expresses something more about the matrix predicate in its superordinate clause:

- 
- (27) Osjecala se inhibirnom[kada je trebalo[***da*** govori o sopstvenim knjigama]]
 feel-1sgF refl inhibited-F when Aux-3sg needed ***da*** speak-3sg about own books
She felt inhibited about discussing her own books. (Bibovic (1984), 377)

- 
- (28) “..ako se zna [***da*** su tamo ubacivali bombe], [***da*** su prijetili], [***da*** su svecenike
 if its known ***da*** Aux-3pl there drop bombs ***da*** Aux-3pl threaten ***da*** Aux-pl priests
 fizicki smaltretirali]...”
 physically abused
...if it is known that they were dropping bombs there, that they were threatening, that they physically abused the priests...

Here we see evidence that complementizers function as connective tissue between clausal complements and that which appears before them. This is why sentences such as (29) are ungrammatical, precisely because we don't know to which sentence *da*-clause is a complement.³

- 
- (29) *rekao je [***da*** je umoran] [svima je jasno] (NSE/NSJ)
 say-3sgM Aux-3sg ***da*** be-3sg tired-sgM everyone be-3sg clear
?He said [that he is tired] and this became obvious to everyone.

or

? He said that it became obvious to everyone that he is tired.

Instances where a *da*-clause occurs sentence initially, or has moved and no longer immediately follows that which it is a complement of, faithfully maintains its

3. See Frajzyngier (1996, 94) for additional discussion.

complement function to the modifying segment. Subordinate clauses without a complementizer cannot move freely out of their complement positions. If moved, as example (33) shows, they render the sentence meaningless.

- (30) [Da si mi ti to rekao], ne bih ti vjerovala. (NSE)
da Aux-2sg me-Dat you-Nom that-Acc say-3sgM not would-1sg you-Dat believe-1sgF
If you had told me that, I wouldn't have believed you.
- (31) Ne bih ti vjerovala [da si mi ti to rekao]. (NSE)
 not would-1sg you-Dat believe-1sgF *da* Aux-2sg me-Dat you-Nom that-Acc say-3sgM
I wouldn't have believed you if you had told me that.
- (32) Ti si mi to rekao. (NSE)
 you-Nom Aux-2sg me-Dat that-Acc say-3sgM
You told me that.
- (33) *Ti si mi to rekao ne bih ti vjerovala. (NSE/NSJ)
 you-Nom Aux-2sg me-Dat that-Acc say-3sgM not would-1sg you-Dat believe-1sgF
**You told me this I wouldn't have believed you.*

2.2. Omissions

Native speaker judgments show a pattern that if *da* is omitted, not only must the whole complement clause be removed, but also much of the superordinate sentence. And then the original meaning has been completely lost. The fact that native speakers cannot omit *da* and retain the intended meaning answers the question about whether *da* has a function at all, and whether this function is transparent to the hearer. It must be that it does, and that it is, otherwise its absence would not make any difference with respect to the meaning of a sentence. So, what is the function of *da*?

To answer this question, let us return to some rudimentary properties of *da*. As mentioned in the earlier sections, a group of verbs (like *smatrati* ‘to consider’ and *htjeti* ‘to want’) take *da*-complements with a higher degree of frequency. This suggests that some verbs are subcategorized for or prefer, but do not license, *da*-complements. When *da-comp* is used in conjunction with these verbs, it behaves as a complementizer information filler. That is, *da* announces additional information contained within the embedded clause about its immediately preceding predicate. But this is not unexpected. Other complementizers, *sto* in (34) and *kada* in (35) for instance (*what* and *when*, respectively), also provide additional information about the matrix predicate. They do so by virtue of introducing a complement clause whose function, as Frajzyngier (1996) explains, is to behave as “anaphora referring to something that was previously mentioned in speech” (100).

- (34) Rekao sam im ono [**sto** mi je palo na pamet]... (NDC: jergovic_sar 97087 3)
say-1sgM Aux-1sg them-Dat that-Acc **sto** me-Dat Aux-3sg fall on mind
I told them that which first came to me...

- (35) ...svi su osjetili olaksanje [**kada** sam otisao]... (NDC: VJ981216s 8517 61)
all Aux-3pl feel-pl relief-Acc **kada** Aux-1sg leave-1sgM
...*everyone felt a relief when I left...*

On the basis of what has just been illustrated, it cannot be the case that the sole function of the *da* complementizer is to signal the following complement clause.

The presence of *da*, however, shows a peculiar pattern with respect to the coding between the subject of the matrix and the subject of the embedded clause. In a significant amount of data from a variety of sources (NDC, NSE, and older publications), the *da*-complementizer is not used when the subject of the embedded clause is coreferential with the subject of the embedded clause. (see examples (38), (39), (40), (42), (44) and (46))

- (36) Znas **da** to kosta... (NDC: me980826_c02 10916 33)
know-2sg **da** that-Acc cost
You know that this is expensive.

- (37) ??(Ja) zelim **da** (ja) idem. (Craig 149 with NSJ)
I want-1sg **da** (I) go-1sg
I want (for me) to go.'

- (38) Zelim ici. (Craig 149)
want-1sg go
I want to go.

- (39) Pocela sam zaradivati prije deset godina. (Craig 149)
begin-1sgF Aux-1sg earn-Inf before ten years-Gen
I began to earn money ten years ago.

- (40) Pocela sam zaradivati novce. (modified (39) to fit standard Cro dialect)
begin-1sgF Aux-1sg earn-Inf money-Acc
I began to earn money.

- (41) ?Pocela sam **da** zaradujem novce. (Craig's 149 and NSJ judgment: very uncommon)
begin-1sgF Aux-1sg **da** earn-1sg money-Acc
I began to earn money.

- (42) Zelim govoriti s tobom. (Craig 149)
want-1sg speak-Inf with you-Inst
I want to talk with you.

- (43) ?Zelim ***da*** govorim s tobom. (NSE/NSJ)
want-1sg ***da*** speak-1sg with you-Inst
I want to talk with you.

- (44) Mozemo ici zajedno. (Craig 150)
can-1pl go-Inf together
We can go together.

- (45) ?Mozemo ***da*** idemo zajedno. (NSE/NSJ)
can-1pl ***da*** go-1pl together
We can go together.

- (46) Moram otici zubaru. (Craig 150)
have to-1sg go-Inf dentist-Dat
I have to go to the dentist.

- (47) ?Moram ***da*** idem zubaru. (NSE/NSJ)
have to-1sg ***da*** go-1sg dentist-Dat
I have to go to the dentist.

When the matrix subject is NOT coreferential with the embedded subject, *da* must be inserted:

- (48) Zelim ***da*** ti ides. (Craig 154)
want-1sg ***da*** you-Nom go-2sg
I want you to go.

- (49) Treba ***da*** mi pitamo iskusnije ljude. (Craig 151)
need ***da*** we-Nom ask-1pl experienced-Acc people-Acc
We must ask more experienced people.

- (50) Trebamo pitati iskusnije ljude. (NSE/NSJ; modified (49) to fit standard Cro dialect)
need-1pl ask-Inf experienced-Acc people-Acc
We must ask more experienced people.

- (51) *Treba ***da*** pitati iskusnije ljude. (NSE/NSJ)
need ***da*** ask-Inf experienced-Acc people-Acc

And when matrix object is coreferential with the subject of the embedded complement, *da*-complement is again inserted:

- (52) Kisa **nas** je sprijecila **da** odemo. (Craig 157)

rain us-Acc Aux-3sg prevent-F **da** go-1pl

The rain kept us from going.

- (53) Podsjetio **me** je **da** ne zaboravim. (Craig 158)

reminded-3sgM me-Acc Aux-3sg **da** not foreget-1sg

He reminded me not to forget.

- (54) Dozvolili su **nam** **da** uradimo. (Craig 158)

permit-3pl Aux-3pl us-Dat **da** do-1pl

They allowed us to do that.

- (55) Zamolio sam **ga** **da** ostane. (Craig 158)

ask-1sgM Aux-1sg him-Acc **da** stay-3sg

I asked him to stay.

On the basis of the above examples, it is tempting to make a claim that *da*-comp, in addition to introducing a complement clause, functions to code switch-reference between the subject of the matrix and the subject of the embedded clause. However, to do this would be presumptuous because of the multiple instances in which such constructions are acceptable (examples (37), (41), (43), (45), (47)) even though native speakers judged them to be uncommon or not sounding quite right, but nevertheless acceptable. Therefore, the difference in the meaning between these marginally-acceptable sentences and their preferred counterparts ((38), (40), (42), (44) and (46) respectively), which have no *da* complementizer, can not be triggered by switch reference or coreference restrictions. Rather, the difference in the meaning arises because of the presence of an overt complementizer which renders the interpretation of the proposition as either factual and realizable or nonfactual and hypothetical.⁴ I provide support for this claim in the next section.

2.3. Comparisons with other complementizers

In this section, drawing on Bibovic (1984, 369), I compare *da*-complements with complements introduced with the other two main complementizers in Croatian, *sto* and *kada* (*what* and *when*, respectively). These three complementizers have been claimed to play an important role in the meaning of the sentences. Specifically, they have been said to pattern with verbs depending on the verb's realis/irrealis membership.

Amongst others, Vrzic (1996), Craig (1975), Bibovic (1984), Penchev (1982), have made arguments for the realis/irrealis subcategorization of verbs in Croatian--each "licensing" a certain complementizer. Realis sentences are theorized to be introduced

4. See Frajzyngier (1995, 482) for additional supporting material.

with a ***resultative*** (epistemic) complementizer *sto*, which belongs to the *de re* domain (the domain used for things that actually exist or happen); it is further said that *sto* introduces finite clauses (factual and causal; clauses of reason). The function of *sto* has been claimed indisputable (that is, it has been firmly and clearly established) and also holds for the present data.

- (56) Jovan nece doci [zato *sto* je bolestan]. (Bibovic 1984, 370)

John won't-3sg come because *sto* Aux-3sg sick-M
John won't come because he's ill.

The adverbial complementizer '*kada*' functions to specify the temporal reference of the time of the event or discourse,

- (57) Sibila je bila velikodusna [kada mu je rekla istinu]. (Bibovic 1984, 375)

Sibila Aux-3sgF generous when him-Dat Aux-3sg say-3sgF truth-Acc
Sibila was generous when she told him the truth.

while the *da*-complementizer is said to introduce unrealis predicates (that is, the non-factive or counterfactual predication about future):

- (58) Nesposoban je [*da* shvati takvu ljubav]. (Bibovic 1984, 370)

incapable-3sgM Aux-3sg *da* understand-3sg such-Acc love-Acc
He is incapable of understanding such love.

The main question that one must ask now is what exactly distinguishes the realis/unrealis quality of the matrix verbs in the above-listed examples. As examples below affirm, Croatian does not subcategorize matrix verbs into realis and/or unrealis. For example, the verb *čuti* 'to hear' is used to attest a direct perception of a proposition in (61). The coding of an overt direct object in the matrix clause places *čuti* into the realis category, coding the *de re* or factual status of a proposition. But *čuti* also occurs with a *da* complement (and absence of matrix coding) in (62), and the overall matrix predicate is rendered unrealis. Similarly, *znati* 'to know,' thought of as an inherently realis verb (coding direct perception), and *željeti* 'to wish,' an unrealis verb, both pattern with the *da* complementizer. Therefore, it can not be the inherent realis/unrealis property of a verb that renders the meaning of a sentence hypothetical, but rather the presence of the *da* complementizer. Examples (59) through (63) are native-speaker solicited examples, and have been molded after Frajzyngier and Shay examples testing epistemic coding with verbs of perception (M.S. 152-155).

- (59) Znam *da* ga nije bilo.

know-1sg *da* him-Acc not be-pst
I know he was gone.

(60) Zelim ***da*** ga nema.

wish-1sg ***da*** him-Acc not
I wish he were gone.

(61) Cula sam **ga** kada je govorio u tvornici. → matrix coding of direct perception

hear-1sgF Aux-1sg him-Acc when spoke-3sgM in factory-Loc
I heard him when he was speaking in the factory.

(62) Cula sam ***da*** je govorio u tvornici. → no matrix coding (indirect perception)

hear-1sgF Aux-1sg ***da*** spoke-3sgM in factory-Loc
I heard that he spoke in the factory.

(63) **Cula sam **ga** ***da*** je govorio u tvornici. → matrix coding and *da*-comp

hear-1sgF Aux-1sg him-Acc ***da*** spoke-3sgM in factory-Loc
***I heard him that he was speaking in the factory.*

The above sentences illustrate that the absence of matrix coding and the presence of the complementizer *da* code indirect perception in Croatian. Absence of coding of the embedded clause subject in the matrix clause indicates that the embedded clause is in the hypothetical mood. Matrix coding is used to signal realis modality and since verbs in Croatian are not inherently realis/irrealis, matrix coding alone indicates the realis mood, whereas the absence codes irrealis. Furthermore, as expected, example (63) illustrates that simultaneous matrix coding (realis) and *da*-complementizer (irrealis) cannot occur together.

In the following sentences with *sto*-complement and *da*-complement substitutions, the function of *da*-comp becomes evident.

(64) Sretan sam ***sto*** te vidim. (NSE/NSJ)

happy-M Aux-1sgM ***sto*** you-Acc see-1sg
I am glad to see you. → *I am happy because I see you now*

(65) Sretan sam ***da*** te vidim. (NSE/NSJ)

happy-M Aux-1sgM ***da*** you-Acc see-1sg
I am glad to see you. → *I am happy whenever I get an opportunity to see you. (if I see you)*

(66) Tesko mu je ***sto*** zivi sam. (NSE/NSJ)

difficult him-Dat Aux-3sg ***sto*** live alone-M
It is hard for him to live alone. → *It is hard for him as a consequence of living alone.*

- (67) Tesko mu je ***da*** zivi sam. (Bibovic 1976, 9)
 difficult him-Dat Aux-3sg ***da*** live alone-M
It is hard for him to live alone. → It is hard for him to live alone.

- (68) Kao ***sto*** sam ti rekao, mladicu... (NDC: stiks_dvorac 11568)
 as ***sto*** Aux-1sg you-Dat tell-M young man-Voc
As I told you, young man...

- (69) Kao ***da*** sam ti rekao, mladicu... (NSE/NSJ)
 as ***da*** Aux-1sg you-Dat tell-M young man-Voc
As if I had told you, young man...

Matrix verbs in examples (64), (66), and (68) are followed by a *sto* complement. The same matrix verbs are then followed by a *da* complement in (65), (67), and (69). These pairs of sentence (one with the *sto* and the other with the *da* complementizer) are identical but for the complementizer. It is precisely this singular distinctive feature that brings about the change in the sentence meaning. Therefore, it must be that the *sto*-complementizer encodes the matrix clause as factual or epistemic, while the *da*-complementizer functions as a habitual, indirect or hypothetical *de dicto* marker.⁵ If this analysis is correct then we should expect that a *de re* complement (i.e. *sto-complement*) cannot be conjoined with another resultative clause, but *de dicto* can. And this is the case as the following sentences indicate:

- (70) Tesko mu je ***da*** zivi sam i zato zivi sa sinom. (NSE/NSJ)
 difficult him-Dat be-3sg ***da*** live-3sg alone-M and therefore live-3sg with son-Inst
It is hard for him to live alone and that is why he lives with his son.

- (71) *Tesko mu je ***sto*** zivi sam i zato zivi sa sinom. (NSE/NSJ)
 difficult him-Dat be-3sg ***sto*** live-3sg alone-M and therefore live-3sg with son-Inst
** It is hard for him as a consequence of living alone and that is why he lives with his son.*

3. Conclusion: Toward a common function

da-complementizer introduces a complement clause which says more about the immediately preceding predicate. Therefore, each time a *da*-clause is used it is a comment on something else. The *da* complement cannot be interpreted in isolation (*'da je umoran' ?*that he is tired*..., unlike 'umoran je' *he's tired*), and is therefore said to be pragmatically dependant on the matrix clause. Regardless in what construction *da* is used, its combinatorial possibilities are limited to occurring with certain verbs that are

5. *de dicto* and *de re* domains are explained in more depth in Frajzyngier (M.S., 210-11), Frajzyngier and Jasperson (1991), and Frajzyngier (1991).

subcategorized for *da* complements. As we have seen, this does not mean that a verb licenses a specific complementizer since no one verb takes only one kind of a complement.

However, when the *da* complementizer follows a matrix verb, it functions to code the matrix clause for its modal property – hypothetical mood. This function of coding deontic modality is most clearly evident when the *da* complementizer is juxtaposed with the epistemic *sto* complementizer. In otherwise identical sentences, the deontic modality is brought forth via *da* complementizer, and *sto* complementizer renders the epistemic status of proposition. Whether there also exists a declarative *da*, in addition to the modal *da*, is a matter that needs to be researched further before any conclusive claims may be made. At this time it is unclear whether the indicative reading is merely a consequence of an alternative *da* complementizer, or whether perhaps the verb's lexical and aspectual properties outweigh the modal properties of the complementizer.

The data presented in this paper however provide sound evidence that the *da*-complementizer belongs to the deontic (hypothetical) *de dicto* domain (a domain of speech that can extend to hypothetical), whose specific function is to signal *potentially realizable habitual events*.⁶

Također bi bio promašaj kad bi koji čovjek mislio e i u duhovnoj obnovi društva. <h3> Uvjjeti za rad</h3> <p> sredne priprave na Svetu godinu 2000. Stoga bi bilo dobro i Vrhovnom sudu, a Vrhovni sud ovaj put nije donio odluku istrui su ocjenili kao neutemeljen, jednako kao i tvrdnju ržavali od kritike dok se EU stvarao, i to sve u interesu vnodušno prema životinjama, a da je Papa nedavno izjavio "i, koji su u jutarnjim izdanjima dnevnih novina pročitali nskom dvojicom: komu od dvojice svojih najbližih suradnika ništu SFRJ prevladao optimizam, pa se razmisljalo i tome za osmišljavanje suvremene »duhovne igre«, već i težnjom era.
 S obzirom da ga nije bilo na programu, znali smo log to da Šarinićevo odsustvo iz Zagreba ili pak procjena ina Srjan.
 Više detalja podupire pretpostavku e da je iskoristite na najbolji mogući način. Zato tvrdim kog spota u programima Hrvatske televizije u jednom danu. f" WIDTH=12 HEIGHT=12> Trebat će ići posudjivati okolo. Ma d jedne do pet godina zatvora. Kazneni zakon, naime, kaže e. No, da bi se ovaj proces ispravno odvijao, potrebno je ta, a odredbe traže do to bude između 20 i 30 kandidata i duhovnom i u materijalnom pogledu, civilizacijski, radno, aljka napravimo mali otvor i usmjerimo nakupinu elektrona jačanje imunosti pridonijeti uništenju tumora, tek ostaje drug Marko mu ovaj put ne dopusti.</P><P>'Pričekaj malo, edan problem muči predsjednika Tuđmana. On, naime, smatra mir Šoljić pokušao u Den Haagu nagovoriti zatočene Hrvate TV-a, stidljivo progovorilo tek iza prognoze vremena. Kao je u ponedeljak čelnik Kluba HDZ-a Vladimir Šeks dodavši amjenika, a u ono doba nije ni ispitivao, jer se smatralo nog trga sa željom, zapravo potrebot da bar malo prošeće, to »zovetek», ali već je bilo kasno: riječ je odletjela...

da su u subotu poslije 13 sati u selu Dašincu, pokraj Deča da su profesori dosadni, a program nepotrebitno slušati. Nar da se preseli u SAD jer sam sigurna da bio i tamo napravio da ga se ne shvaća kao suvremenii društveni fenomen koji bi da se tehnika odnosi na sredstva za rad, znanja proizvodnji da je oporba prilično mlako reagirala na aferu oko Dubrova da njihova vlada donese odluku da za školstvo iz BDP-a izd da su oni koji su željeli uništiti svaki hrvatski trag na da se u zaključak unese malo drukčija formulacija. Umjesto da međunarodna zajednica umjesto nas mora donositi zakone da se ovo tlo sastoji od pijeska koji je pomiješan s nešto da se svakom umirovljeniku individualno povećava mirovinu da se sučele s vinovnicima te afere, a, po svemu sudeći, i da bi taj odlazak oporbenjaka u Ameriku HDZ mogao iskorist da će naše pisanje i pisanje akademika Babića biti doprino da se varam! Ne, ne, moj slatki gosparu, ja bih i danas bi da bi se ispitale i ustanovile sve okolnosti i posljedice da je i ovoga puta zakazala vlast, jer je ona (a ne netko da su i dosadašnji vojni sporazumi davali rezultata, prije da je iz Sarajeva nikad to niste istaknuli?
 To mi da je to toliko dugo čekano priznanje, u stvari »dbebelo« k da vanjskim svojim držanjem, poštivanjem drevnih običaja, Da bi se netko mogao služiti metodom hagioterapije, potreb da se na prvu nedjelju došašća u svim našim crkvama navije da Obrvan nema pravo žalbe nego da je njegova žalba neosno da Njemačka izvozi više na tržište EU-a nego ostale članic da ideja europskog ujedinjenja uspije. Međutim, sada, nako da kršćani moraju promijeniti svoj odnos prema životinjama da su Brena i Boba u Zagrebu, čekali već od 10 sati ujutro da vjeruje u aferi oko Dubrovačke banke, Hrvatu Šariću i da se Tita na daljnji oporavak prebac u njegovu rezidenci da se suptilnost modernih književnih postupaka približi ko da će prvi dodatak biti obavezan valcer »Na lijepon plavom da nakon političkog debakla u Hercegovini ne može potpisat da je netko požar podmetnuo. U štaglju nije bilo električni da u životu nije odlučujući talent, nego rad i volja. Najv Da Hrvatska televizija nije pretjerala, uvjerili smo se i da sam to mogla znati i posljednju kunu bih dala za osigur da je za to kazneno djelo, odavanje poslovne tajne, predvi da preživači imaju dovoljno »voluminozne« hrane (trava, si da pri sastavljanju te liste župnik vodi računa o tome da da sve što o Hrvatskoj govorimo i sanjamo bude na novom pu da proleti kroz valjak. Slučaj a: u rezonantnoj šupljini n da se utvrdi. S druge strane, poticanje na proliferaciju t da ipak tu stanemo', poče on i onda upita Marijana: 'Rekao da Granić i Valentić ne podupiru dovoljno iskreno njegovu da javno podupr HDZ BiH na rujanskim izborima i ograde se da Ksenija Urličić s time nema baš nikakve veze i da su za da su razgovori s dr. Tuđmanom zasad samo u sferi špekulac da za te poslove još nije spremam. Uglavnom je odlazio u i da i stvarno doživi prestanak zatvorske skućenosti. Usput Da, a ipak sam bio svjestan kako postoji razlog zašto sam
