**SUMMARY:** This paper presents the orbital elements of the visual binary star ADS 16904 =A 643 .For the pair are given the dynamical parallax, the masses, the absolute magnitudes, the measures, the (O-C) and the ephemerides.

The orbital elements of the binary star ADS 16904 have been computed by using the Thiel-Innes and Van den Bos (1926) methods. The dynamical parallax was computed by use of the Baize and Roman (1946) method with magnitudes and spectral

types taken from the Lick Index Catalogue of Visual Double Stars, 1961.0 (Jeffers, 1963). The orbital elements with the dynamical prallax, the total mass, the absolute magnitudes and the major axe are given in Table 1, the ephemerides in Table 2, the measures and the comparasion with the measures in Table 3.
