

Contributions to the Macrofungi Flora of Gümüşhane Province

Yusuf UZUN, Ali KELEŞ, Kenan DEMİREL
Yüzüncü Yıl University, Faculty of Arts & Science, Department of Biology, Van - TURKEY

Received: 03.11.2003
Accepted: 22.11.2005

Abstract: Some macrofungi specimens were collected from Gümüşhane province between 2001 and 2003. As a result of field and laboratory studies, 105 taxa belonging to 2 classes and 24 families were identified. These taxa are presented in a list. Of the 105 taxa, 14 are new records for the mycoflora of Turkey.

Key Words: Macrofungi, Gümüşhane, Turkey.

Gümüşhane Yöresinin Makrofungus Florasına Katılılar

Özet: Gümüşhane yöresinde, 2001-2003 yılları arasında yapılan arazi çalışmaları ile bazı makrofungus örnekleri toplanmıştır. Arazi ve laboratuvar çalışmaları sonucunda 2 sınıf ve 24 familya içinde dağılım gösteren toplam 105 makrofungus taksonu tanımlanmıştır. Bu taksonlar liste halinde verilmiştir. Bunlardan 14 takson Türkiye mantar florası için yeni kayıttır.

Anahtar Sözcükler: Makrofunguslar, Gümüşhane, Türkiye

Introduction

Many studies have been carried out to determine the macrofungi flora of Turkey (Baytop, 1994; Baytop & Mat, 1998; Mat & Gücin, 2000; Sesli & Denchev, 2005), there is no report in the literature on the macrofungi flora of Gümüşhane.

Gümüşhane is a transitional area between the Black Sea and East Anatolia regions, and this is reflected in its vegetation. *Fagus* L. sp., *Pinus* L. sp., *Quercus* L. sp. and *Juniperus* L. sp. forests are dominant above 1500 m altitude. Gümüşhane is located in the East Black Sea region and is surrounded by Bayburt, Giresun, Trabzon and Erzincan (Figure 1). The geographical position of Gümüşhane is 38° 45' - 40° 12' East longitude, 39° 45' - 40° 50' North latitude and its altitude is about 1210 m. It covers 6575 km² consisting of 60% mountainous, 29% plateau and 11% lowland areas. In general, the climate is quite dry in summer, rainy in autumn and spring, and snowy in winter.

The aim of the present study was to determine the macrofungi taxa growing in Gümüşhane province, to identify edible, inedible, wood decaying and poisonous

taxa and to make a contribution to the macrofungi flora of Turkey.

Materials and Methods

The macrofungi samples were collected during field trips in Gümüşhane province between 2001 and 2003 (Figure 1). During fields studies, colour slides of the macrofungal specimens were taken in their natural habitats. After relevant notes were taken on their morphological and ecological features, they were put in specially prepared boxes and brought to the laboratory. Their spore prints were taken and spore dimensions were measured using an ocular micrometer. Then dried specimens were placed in locked polyethylene bags and kept in a deep freeze at -20 °C to protect them from parasites. All specimens are kept in the Herbarium of Yüzüncü Yıl University, Department of Biology.

We identified the specimens using the literature on macrofungi by Breitenbach & Kränzlin (1984-2000), Bresinsky & Besl (1990), Buczacki (1989), Ellis & Ellis (1990), Jordan (1995), Kibby (1997), Moser (1983) and Phillips (1981).

Results

One hundred and five macrofungi taxa were identified belonging to 24 families in the classes *Ascomycetes* and *Basidiomycetes*. Collection localities, dates and herbarium registration numbers (K: Keleş, U: Uzun, D: Demirel) are given below. New records are indicated by an asterisk (*).

Ascomycetes

Pezizaceae

1. **Otidea alutacea* (Pers.) Massee

Gümüşhane, Kürtün, Örümcek Forest, in conifer forest, 17.09.2002, K.U.D. 1243.

Basidiomycetes

Hydnaceae

2. *Hydnus repandum* L.: Fr.

Gümüşhane, Zigana Mountain, in mixed forest, 16.09.2002, K.U.D. 1197; Kürtün, Özkürtün Village, Karaçukar Forest, in conifer forest, 17.09.2002, K.D.U. 1205; Zigana Mountain, in conifer forest, 09.09.2001, K.D.U. 879.

Hymenochaetaceae

3. *Phellinus igniarius* (L.: Fr.) Quél.

Gümüşhane, Kale Village, on stumps of poplar trees, 04.11.2001, K.U.D. 1012.

4. *Phellinus igniarius* var. *cinereus* Niemelä
Gümüşhane, Şiran, on stumps of willow trees,
16.06.2003, K.U.D. 1499.
5. *Phellinus nigricans* (Fr.) Karst.
Gümüşhane, Kelkit, Ünlüpınar Village, on stumps of
willow trees, 16.06.2003, K.U.D. 1469.
6. *Phellinus vorax* (Harkness) Černý
Gümüşhane, Torul, on stumps of poplar trees,
10.05.2001, K.U.D. 855.
7. *Phellinus tuberculosus* (Baumg.) Niemela
Gümüşhane, Kale Village, on *Prunus* sp., 04.11.2001,
K.U.D. 909; Akçahisar Village, on poplar tree,
04.11.2001, K.U.D. 913.
- Polyporaceae**
8. *Funalia troqii* (Berk.) Bond. & Sing.
Gümüşhane, Akçahisar Village, on poplar trees,
04.11.2001, K.U.D. 914; Köse, on stumps of willow
trees, 16.06.2003, K.U.D. 1495; Gümüşhane, Şiran, on
stumps of willow trees, 16.06.2003, K.U.D. 1503.
9. *Fomes fomentarius* (L.: Fr.) Fr.
Gümüşhane, Kale Village, on poplar tree,
04.11.2001, K.U.D. 903.
10. *Fomitopsis pinicola* (Fr.) Karst.
Gümüşhane, on stumps of poplar trees, 04.11.2001,
K.U.D. 897.
11. *Polyporus squamosus* Huds.: Fr.
Gümüşhane, Kale Village, on stumps of poplar trees,
04.11.2001, K.U.D. 907; Kürtün, on stumps of willow
trees, 17.09.2002, K.U.D. 1248; Torul, on stumps of
poplar trees, 10.05.2001, K.U.D. 854; Torul, on stumps
of poplar trees, 16.09.2002, K.U.D. 1346; Köse, on
stumps of willow trees, 15.06.2003, K.U.D. 1507;
Gümüşhane, on stumps of willow trees, 15.06.2003,
K.U.D. 1509.
12. *Pycnoporus cinnabarinus* (Jacq.: Fr.) Karst.
Gümüşhane, Kürtün, Örümcek Forest, on stumps of
pine tree, 17.09.2002, K.U.D. 1306.
13. *Trametes suaveolens* (L.: Fr.) Fr.
Gümüşhane, Kale Village, on stumps of willow trees,
04.11.2001, K.U.D. 906; Kürtün, Örümcek Forest, on
stumps of pine tree, 17.09.2002, K.U.D. 1247; Kürtün,
- Özkürtün Village, Karaçukar Forest, on stumps of pine
tree, 17.09.2002, K.U.D. 1255.
- Ganodermataceae**
14. *Ganoderma adspersum* (Schulz.) Donk.
Gümüşhane, on *Morus* sp., 26.06.2002, K.U.D.
1423.
- Clavulinaceae**
15. *Clavulina cinerea* (Fr.) Schroet.
Gümüşhane, Kürtün, Örümcek Forest, in conifer
forest, 17.09.2002, K.U.D. 1236.
- Schizophyllaceae**
16. *Schizophyllum commune* Fr.
Gümüşhane, Kelkit, Ünlüpınar Village, on willow
trees, 16.06.2003, K.U.D. 1470.
- Cantharellaceae**
17. *Cantharellus cibarius* Fr.
Gümüşhane, Kürtün, Örümcek Forest, in conifer
forest, 17.09.2002, K.U.D. 1240; Kürtün, Özkürtün
Village, Karaçukar Forest, in conifer forest, 17.09.2002,

Discussion

In the present study, 105 macrofungi taxa belonging to 2 classes and 24 families were identified. Among them, 38% (41 taxa) are edible, 49.4% (52 taxa) are inedible, 12.6% (12 taxa) are poisonous and 17.1% (18 taxa) cause wood decay.

Six taxa of edible macrofungi are well known and are eaten by local people, although 41 of the 105 identified taxa are reported as edible in the literature. These are *Cantharellus cibarius*, *Lactarius deliciosus*, *Agaricus bisporus* var. *bisporus*, *Pleurotus eryngii*, *Pleurotus ostreatus* and *Marasmius oreades*. According to official

records, no cases of poisoning have been recorded in the district so far. This might indicate that local people collect only well known taxa of macrofungi.

The most widespread families in the region are *Russulaceae* (18 taxa), *Tricholomataceae* (12 taxa) and *Cortinariaceae* (8 taxa). The members of *Tricholomataceae* have no particular habitat, while *Russulaceae* and *Cortinariaceae* prefer mostly forest environments.

The taxa identified in the present study were compared to those in studies carried out in neighbouring areas. The similarities were indicated as a percentage as

follows: Erzurum 31.8% (32 taxa), Maçka 11.2% (12 taxa) and Giresun 5.6% (6 taxa). These patterns show quite low similarities, possibly due to different climatic and vegetation conditions or stochastic sampling errors.

In conclusion, a contribution was made to the mycoflora of Turkey by adding 14 species as new records. These are *Otidea alutacea*, *Boletus pseudosulphurens*, *Hygrocybe helobia*, *Mycena viridimarginata*, *Entoloma corvinum*, *E. elodes*, *Pluteus brunneoradiatus*, *P. nigrofloccosus*, *Amanita nivalis*, *Cortinarius rubricosus*, *Lactarius tabidus*, *Russula decipiens*, *Russula emeticicolor* and *Russula firmula*.
